

# Track your income and expenses

Use the Quicken banking features to save time and effort when tracking your income and expenses. The QuickFill feature makes entering transactions in the register quick and simple. And if you assign categories to your transactions, Quicken can help you make a budget that you can live with, create reports to find out where your money really goes, and run a host of powerful planning tools.

To really speed things up, be sure to update transactions and balances directly from your financial institution, make online payments, even receive bills online. Besides automating many of your regular chores, online banking can also improve the accuracy of your records and simplify the process of balancing your checkbook.

This section covers the tools that help you track your personal income and expenses. If you purchased Quicken Home & Business, you'll have additional tools that can help you track business income and expenses as well.
